WHY CHOOSE TRIPLE GLAZING OVER DOUBLE GLAZING?

If double glazing makes a modern house comfortable to live in, the impact of triple glazing is even greater.

With a triple glazed unit the internal surface temperature is around 2 degrees warmer than with a modern double glazed unit*. This means that it is more comfortable to stand next to windows as any cold spots and internal condensation are eliminated.

Triple glazed units are up to 40% more thermally efficient than double glazed units, helping to reduce your energy bills and carbon emissions. With triple glazing, homes are able to stay warmer for longer and you can expect fewer cold spots and drafts near windows. The extra pane of glass provides a security benefit too.

Through adjusting the glass combination, triple glazed units can also be optimised to provide outstanding acoustic performance, minimising noise levels from outside. This could benefit you if you live close to a road or in a densely populated area.

Triple glazed windows are more secure

Having a third pane of glass in a window makes a triple glazed sealed unit harder to break through. Triple glazed windows are also internally beaded and the glass unit can only be removed from the frame from inside the property enhancing their security further.
